⚭Introduction

Incorta is very different from your traditional database, data warehouse, or business intelligence application.

Incorta is a **Unified Data Analytics Platform**.

With Incorta, there is no need for data transformation or intensive data modeling. You can analyze large and complex business data sets in real-time.

Incorta's secret is **Direct Data Mapping™**. Direct Data Mapping™ gathers intelligence about structured data to deliver jaw-dropping performance, even with billions of rows, hundred of joins, and thousands of tables. Direct Data Mapping™ bypasses the need for traditional data modeling, eliminates unnecessary data reshaping, and overnight batch jobs for Extract, Transform, and Load (ETL) procedures.

Incorta makes it easy to connect to and ingest data from databases, data warehouses, cloud applications, data streams, and data lakes. Incorta is the only **unified data analytics platform** that retains all row-level security from the source systems.

Incorta's powerful Analytics lets business analysts and users drill into aggregated Key Performance Indicators (KPIs) and view raw transactions at the row level. With data veracity and high fidelity at everyone's finger tips, folks quickly adopt new preferences for Incorta's business-friendly, easily-shared dashboards. Incorta also integrates nicely with what data warriors traditionally prefer: Power BI, Tableau, and MS Excel.
